

## **L1 Technologies Unveils iGolfGPS Software v3.0 for PDAs**

*Company further solidifies iGolf brand as leader in handheld golf GPS industry with innovative software launch*

**San Diego, California, March 28, 2007** – L1 Technologies, a leading developer in the civilian GPS technology industry and maker of the award winning iGolf GPS Caddie, has released iGolfGPS Software v3.0, an application that enables a GPS-ready Pocket PC or Palm handheld device to provide golfers with precise distance measurements to the front, center and back of the green from anywhere on the course.

“With the increasing popularity of PDAs and advances in PDA technology, consumers expect their handheld devices to do it all,” explained David Alexander, VP of Sales for L1 Technologies and iGolf. “From the tech savvy golfer to the traveling businessperson, iGolfGPS v3.0 enables their PDA to not just work hard, but play hard, too.”

In addition to providing the distances to the green, the software allows users to add up to eight custom points per hole, measure the distances of drives and other shots, and keep score for four players with an electronic integrated scorecard. The iGolfGPS v3.0 software retails for \$49.99 and is available at [www.iGolf.com](http://www.iGolf.com).
