

L1 Technologies Releases New iGolf GPS Caddie II

San Diego, California, October 11, 2007 – L1 Technologies has released the iGolf GPS Caddie II, an affordable GPS handheld device that provides golfers with precise distance measurements to key points from any golf course in the world.

The GPS Caddie II utilizes a new user interface, which has been enhanced and revamped. The user interface, the manner in which information is displayed on the screen and how one interacts with the device, is the most important aspect of this product. It determines how one uses the product on the course and how easily important information is displayed. “The GPS Caddie has been in the market for two years and during this time there have been many suggestions for enhancement” said David Alexander, Director of Sales at iGolf. “We considered these suggestions and have made the changes that our customers requested”.

Additional enhancements include:

- Improvements in the way the information is displayed
- Addition of the Auto Course Finder feature which chooses the course closest to you while selecting a course
- Shot Distance Feature is now available on the main play screen
- Ability to map courses or points more conveniently while playing

The new product will also include a new transfer application that will make downloading courses from iGolf.com, sending courses to the device, and obtaining technical support much easier. This application is also available for download from www.iGolf.com/techsupport.

About L1 Technologies

Founded in 2002, L1 Technologies has positioned itself as a leading innovator in the civilian GPS technology sector by focusing on research and development of cutting edge products for the civilian industry, including navigation/telematics platform and SDIO GPS device drivers.
